

Fish Passage Center

Weekly Report #00 - 22

August 4, 2000

2501 SW First Ave., Suite 230
 Portland, OR 97201-4752
 phone: 503/230-4582
 fax: 503/230-7559

SUMMARY OF EVENTS:

Water Supply: No new water supply information has been distributed this week. Please see the previous issue of the weekly report 2000-21 for the data on precipitation records in the basin.

Reservoir Operations: Ongoing operations for summer flow augmentation during the week of July 28 through August 3 were affected by several situations. An explosion occurred in the left powerhouse at Grand Coulee on July 28 at 2:00 p.m. causing uncertainty in Grand Coulee's availability for Monday, July 31. BPA began taking actions over the weekend of July 29/30 to position the system to meet regional loads for Monday. These actions included moving additional water to the lower Columbia River projects, filling above minimum operating pool at Lower Granite and securing Direct Service Industries curtailments. In addition, the California ISO was expected to declare a stage 3 emergency (where firm load is interrupted via rolling blackouts) due to hot weather on July 31 and August 1. If needed, BPA planned to declare a system emergency under the Biological Opinion to aid California. No emergency was declared on Monday, but on Tuesday an emergency declaration appeared imminent. BPA increased generation up to the intertie line capacity. Additional emergency actions included increasing generation at Albeni Falls and Hungry Horse Dams and delaying the start of nighttime spill at John Day Dam for one hour.

A summary of actual elevations on August 3, and full pool elevations is shown in the following Table:

Project	Actual August 3 Elevation in [ft]	Actual Elevation on June 30 & Full Pool Elevation in [ft]
<i>Libby</i>	2435.2	2418.1/2459.0
<i>Hungry Horse</i>	3549.17	3558.3/3560.0
<i>Grand Coulee</i>	1284.2	1279.0/1290.0
<i>Brownlee</i>	2042.88*	2072.06/2077.0
<i>Dworshak</i>	1562.01	1598.6/1600.0

* as of August 2

Libby reservoir continues with refill at a slower pace than previously anticipated, with inflows in the range of 12.4 kcfs-14.5 kcfs. Outflows were maintained on the level of 8 Kcfs, for the period of July 28-August 3.

Hungry Horse continued drafting for summer flow augmentation besides being operated for power emergency on August 1, at rates in the range of 5.20 kcfs-5.95 kcfs for the period of July 28-August 3. Inflows fluctuated in the range of 0.25 kcfs-2.2 kcfs for the same period of July 28-August 3.

Grand Coulee was operated for service due to the fire, with elevations fluctuating between 1284.1 ft and 1284.8 ft and outflows between 96.5 kcfs and 135.1 kcfs. Currently, only the right powerhouse is in service and the left powerhouse remains in repair mode. Inflows fluctuated from 111.3 kcfs on July 30 to 129.4 kcfs on August 1.

Brownlee finished drafting for summer salmon flow augmentation. The reservoir was operated at elevations between 2042.53 ft and 2042.88 ft for the period of July 28-August 2. Inflows to reservoir fluctuated between 9.43 kcfs to 10.25 kcfs for the period of July 28-August 2. Outflow from Hells Canyon Dam for the past week of July 28-August 2 decreased from 11.45 kcfs on July 28 to 6.8 kcfs on August 3.

Dworshak continued drafting for flow augmentation. The outflow was held in the range of 12.8 kcfs-13.2 kcfs in order not to exceed total dissolved gas limit. Inflows to the reservoir fluctuated from 1.5 kcfs to 1.8 kcfs for the period of July 28-August 3.

Upper Snake reservoirs: As of August 3, the Upper Snake system was further drafted to 61% of capacity. American Falls was drafted to 43% of capacity, while Palisades and Jackson Lake

were at 58% and 92% of capacity, respectively. The irrigation demands in the system continued to be high and current flow at diversions at Palisades and Minidoka are 9.97 kcfs and 10.1 kcfs, respectively. Salmon flow augmentation from American Falls continued at rate of 1.5 Kcfs at Milner, which is the lowest point in the Upper Snake system.

Boise and Payette River Basins: As of August 3, the Boise River system was at 76% of capacity. Salmon augmentation continued with flows of 620 - 660 cfs. As of August 3, the Payette River system was at 83% of capacity. Salmon augmentation continued at rates of 810-860 cfs.

Streamflow:

The Biological Opinion summer flow target of 51.3 Kcfs at Lower Granite began on June 21 and 200 Kcfs for McNary began on July 1. Weekly average flows for McNary and Lower Granite remained below the flow targets for the period of July 28-August 3. The daily average flow for the Lower Granite for July 28-August 3 period continued to decrease compared with the flow from the previous week. The pool elevation at Lower Granite was restored to the minimum operating pool of 733.58 ft on August 2. A summary of the weekly average flows and the range of daily average flows are given in the following Table:

Project	Average daily discharge and range [kcfs]	
	July 21-27	July 28-August 3
<i>Priest Rapids</i>	120.3 (86.5-131.0)	133.06 (114.3-157.9)
<i>McNary</i>	159.9 (126.9-181.1)	161.8 (138.1-186.2)
<i>Lower Granite</i>	36.95 (35.5-38.7)	29.6 (22.7-36.4)
<i>Bonneville</i>	169.9 (148.1-192.4)	171.2 (142.3-190.3)

Spill: Outflow from Dworshak Dam continued for summer flow augmentation and temperature regulation. The outflow exceeded hydraulic capacity and spill averaged 3.0 Kcfs over the past week. No dissolved gas waiver has been issued and, consequently, outflow is limited to the level that does not exceed the total dissolved gas standard. The Biological Opinion summer spill program is being implemented at the Lower Snake projects and only calls for spill at Ice Harbor Dam, as transportation is maximized at the collector projects.

Biological Opinion spill as modified by the

NMFS and Action Agencies' Spill Plan continues at the lower Columbia River projects (John Day, The Dalles and Bonneville dams) through August 31. The Bonneville Power Administration proposed to interrupt fish spill in order to assist California if it became necessary for them to declare a power emergency that would have resulted in rolling blackouts. The emergency was averted, and spill was only affected by delaying nighttime spill at John Day Dam for one hour last Tuesday night. The summer spill program is being implemented at the Mid Columbia projects.

Levels of total dissolved gas were below, or near, the allowable TDGS levels at all locations measured. Monitoring for signs of gas bubble trauma (GBT) on fish collected through the Smolt Monitoring Program showed only a few fish with signs of GBT in fins.

Smolt Monitoring Program. Snake River basin: Subyearling chinook passage indices at Lower Granite Dam remained fairly constant this week with daily indices hovering around 2,500 fish; the weekly average was unchanged from the previous week. At Little Goose and Lower Monumental dams the weekly average passage indices for subyearling chinook dropped 33% and 55%, respectively. *Mid-Columbia River:* Subyearling chinook passage indices at Rock Island Dam this week remained fairly similar to the previous week (the weekly average dropped only 9%). *Lower Columbia River:* Subyearling chinook passage at McNary Dam also remained fairly similar to the previous week, averaging 67,000 fish per day (a negligible 2% drop from the previous week). The last three days of this week saw a large increase in subyearling chinook passage indices at John Day Dam (this is in agreement with our prediction in the last weekly report that John Day Dam subyearling chinook passage indices should rise again later as a result of that week's increased subyearling chinook passage at McNary Dam). The higher passage indices at Bonneville Dam the last three days of this week reflect, in part, increased flow diverted through Powerhouse 2, where the sampling facility is located, on those days.

Adult fish passage— At Bonneville Dam, chinook salmon are now counted as fall chinook beginning August 1 and continuing through the end of the count season. For the first 3-days, the counts averaged 370 adult chinook with the total through August 3 of 1,123.

At Bonneville Dam, the preliminary count of adult summer chinook totaled 30,598 for the year. This total was 117% and 149% of the respective 1999 and 10-year average. Summer chinook counts at The Dalles averaged 290 per day through the week with the cumulative count 25,024 through August 3. At McNary Dam, daily counts of adult summer chinook averaged 208 per day for the week with the cumulative count through August 3 of 19,950. The cumulative count of adult summer chinook at Ice Harbor Dam was 4,187 with the Mid-Columbia River count at Priest Rapids about 19,700 through August 2. The combined adult summer chinook counts from Ice Harbor and Priest Rapids exceed the total McNary Dam, summer chinook count to date.

The number of jack, summer chinook salmon counted at Bonneville Dam was 13,386 for the season. That total was the highest since 1976 at ~~the project~~ and the 5th highest since 1960. The jack count at Priest Rapids Dam was near 1,900 and will be the highest count of summer jack chinook since 1980. At Ice Harbor Dam, the 3,176 jack salmon was also the highest count since 1976, similar to Bonneville Dam. Overall, these excellent counts of summer chinook, jack salmon should result in much larger returns of adult salmon for the 2-ocean and potentially 3-ocean age returns to the Columbia River in years 2001 and 2002.

Basically, the sockeye run is about over for the year in the lower Columbia River with the Bonneville count 93,119. Year 2000 count was 5.2 times and 2.2 times the respective 1999 and 10-year average. Sockeye counts at the Mid-Columbia projects were: greater than 89,000 at Priest Rapids, 76,000 at Rock Island and 58,500 at Wells Dam. About 77% of the adult sockeye are destined for the Okanogan River Basin (Lake Osoyoos) with the remaining 23% destined for the Wenatchee River Basin. 311 adult sockeye have been counted at Lower Granite Dam through July 29. (Note: this

count includes night-time video counts). Seventeen were unclipped and the remainder being clipped fish from the Captive Brood Enhancement Program. These sockeye are now arriving at the trapping facility in the upper Salmon River and should continue returning to the upper Salmon River basin through this month and early September.

At Bonneville Dam, the daily steelhead counts averaged 3,652 through the week ending August 3. The cumulative count for the project is 107,001, about 1.6 times and 1.7 times greater than the respective 1999 and 10-year average. Daily counts at Bonneville Dam remained at least twice the daily counts at The Dalles Dam with greater than 60,000 steelhead differential between the two projects. At Bonneville Dam about 40.3% of the passage have been recorded as “unclipped” steelhead or “wild”. The passage of steelhead into the Snake River averaged about 250 per day at Ice Harbor with the cumulative count 9,457. Of this total, about 34% of the Ice Harbor count were unclipped or “wild”. The passage of steelhead into the Mid-Columbia projects through the past week had counts ranging near 100 per day at Priest Rapids Dam with the cumulative count now 2,315 and upstream at Rock Island, 1,374.

Coho salmon are just beginning to arrive at Bonneville Dam, but should continue to increase through the month.

Hatchery Releases—Based on preliminary data, about 82.8 million yearling and subyearling fish were released from State, Federal or Tribal hatcheries or Acclimation Ponds for the Year 2000 Migration.

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

LEW and WTB data collected for the FPC by Idaho Dept. of Fish and Game.

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

Note: RIS, RRH numbers are from Chelan Co. PUD and are through 07/30.

Note: PRD current year numbers are from Grant Co. PUD and are through 07/25.

Note: LMN, LGS and WEL are through 08/02.

Note: LGR is missing 7/12 and 07/31.

These numbers were collected from the COE's Running Sums text files.

Wild steelhead numbers are included in the total.

**Adult count records at Little Goose Dam have been maintained since 1991, visual counts were not conducted at Little Goose Dam between 1982 and 1990.

***PRD is not reporting Wild Steelhead numbers.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Two Week Transportation Summary
