

Fish Passage Center

Weekly Report #04 - 21

July 30, 2004

2501 SW First Ave., Suite 230
Portland, OR 97201-4752
phone: 503/230-4582
fax: 503/230-7559

Highlights:

- **Biological Opinion Spill Program to continue through August 31.**
- **Summer flows at Lower Granite Dam have averaged 38.3 kcfs to-date, and at McNary Dam flows have averaged 142.8 kcfs to-date.**

Summary of Events:

Columbia Basin precipitation throughout the first twenty-six days of July has generally been slightly below average in most basins. Over the entire water year, precipitation also remains slightly below average in most basins.

Table 1. Summary of June precipitation and cumulative October through July precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2004 July 1-26		Water Year 2004 October 1, 2003 to July 26, 2004	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	1.31	88	20.56	93
Snake River Above Ice Harbor	0.81	105	15.00	95
Columbia Above The Dalles	0.91	88	19.93	96
Kootenai	1.40	88	20.68	91
Clark Fork	0.69	70	13.93	92
Flathead	1.31	98	18.34	91
Pend Oreille/ Spokane	0.53	46	26.35	93
Central Washington	0.24	77	7.65	93
Snake River Plain	0.61	121	8.64	86
Salmon/Boise/ Payette	0.51	75	16.78	92
Clearwater	0.74	61	28.62	102
SW Washington Cascades/Cowlitz	0.19	16	58.52	88
Willamette Valley	0.12	17	52.37	93

The summer Flow Objective period started in the Lower Snake River on June 21st, 2004 and will end on August 31st, 2004. Flows have averaged 38.3 Kcfs over the summer flow period; the flow objective is 50 Kcfs. Flows at Lower Granite have averaged 30.8 Kcfs over the last week.

The summer flow period began at McNary on July 1st with a flow objective of 200 Kcfs. Flows have averaged 142.8 Kcfs at McNary over the summer season and 126.5 Kcfs last week.

Grand Coulee is currently at an elevation of 1285.4 feet and has drafted nearly two feet over the past week. Because the July Final (April-August) water supply forecast at The Dalles is less than 92 Maf, the summer draft limit at Grand Coulee will be 1278 feet.

The Libby Reservoir has released a constant 12.5 Kcfs for the entire month of July. Libby is currently at an elevation of 2449.5 feet. In response to the last Montana SOR, NOAA Fisheries has recommended maintaining a constant discharge at both Libby (12.5 Kcfs) and Hungry Horse (5.1-5.2 Kcfs) over July and August and release any volume above the BIOP draft elevations in September. This operation will not result in the drafting of the full 20 feet by August 31 from these reservoirs as specified in the 2000 BIOP. Consequently, flows in the lower Columbia will be lower during July and August with this implementation.

The Hungry Horse Reservoir has been drafting slightly over July for summer flow augmentation and is currently at an elevation of 3553.7 feet. Outflows at Hungry Horse have been approximately 5.2 Kcfs over the week.

The Dworshak Reservoir is currently at an elevation of 1572.8 feet and has been drafting over July for flow and temperature augmentation

in the Lower Snake River. Outflows at Dworshak have averaged 11.6 Kcfs over the last several days.

The Brownlee Reservoir is currently at an elevation of 2065.2 feet and has drafted 1.3 feet over the last week. Outflows to Brownlee have ranged between 7.2 and 11.6 Kcfs over the last week.

Spill: The summer spill program is continuing at the Mid-Columbia projects. Some spill at Dworshak Dam has been occurring since July 12, as augmentation flows exceed powerhouse capacity. There has been no spill at Lower Granite, Little Goose or Lower Monumental dams on the Snake River to facilitate the present policy of maximization of fall chinook juvenile transportation. Summer spill for fish passage is continuing at Ice Harbor Dam, with spill averaging 73% of daily average flow from July 23 through July 29. During the same time period, summer spill continued at the Lower Columbia projects with spill averaging 30% of daily average flow at John Day dam, 40% at The Dalles Dam and 48% at Bonneville Dam. There is no summer spill program at McNary Dam as the present Biological Opinion focuses on the maximization of transportation of fall chinook juveniles.

On July 28, 2004 U.S. District Judge James Redden blocked federal dam managers from reducing the amount of water diverted from dam spillways in the Columbia River basin. The court ordered dam managers to continue spilling water through the end of August as specified in the 2000 Biological Opinion. This includes the implementation of the summer spill program at Ice Harbor, John Day, The Dalles and Bonneville dams.

Gas bubble trauma monitoring is continuing at Rock Island, and at McNary and Bonneville dams. No signs of gas bubble trauma have been observed over the past week.

Smolt Monitoring: Subyearling chinook indices decreased at sites in the Snake River and Mid-Columbia, but increased at McNary and John Day dams over the past week compared to the previous week.

At Lower Granite Dam, subyearling chinook

indices were down from an average index of 4,200 per day last week to 1,700 per day this week. Of the wild subyearling PIT-tags passing Lower Granite Dam, Snake River origin tagged fish passed in relatively small numbers this week with 6 detected in the past week down from 16 the previous week for a total of 32% of released tags detected to date. On the other hand, detections of subyearlings marked in the Clearwater River only began three weeks ago, with 27 detected last week and 14 this week, only 3% of total tags have been detected to date at Lower Granite Dam. Little Goose and Lower Monumental dams also had drops in subyearling chinook numbers over the past week, with the index averaging 900 per day at Little Goose, and 300 per day at Lower Monumental compared to 1,700 and 700 last week, respectively.

At Rock Island Dam the numbers of subyearling chinook remained relatively high, with the index averaging 400 per day this week compared to 420 last week. The season high index of 1,019 was reached on July 15.

In the Lower Columbia, at McNary Dam, based on full samples taken every day, subyearling chinook indices averaged nearly 61,000 per day this week compared to nearly 37,000 per day last week. At John Day Dam the subyearling average index was 14,000 per day this week compared to 13,000 last week, while at Bonneville Dam the average index was 10,000 compared to 12,000 last week.

Hatchery Releases : For the 2004 juvenile migration, about 83.3 million yearling chinook, coho, steelhead, sockeye, and subyearling chinook salmon were released from Columbia River Basin hatcheries above Bonneville Dam. Salmon species released into streams or lakes (sockeye) during this summer and fall, 2004, normally reside in the streams or rivers through the winter and then migrate to the ocean the following spring (2005). Hatchery release numbers will be updated and finalized through the year; however, the numbers below represent most of the hatchery releases for the 2004 migration season.

2004 Hatchery Zone Report

Race/Species	Friday 30-July-2004			
	Snake River	Mid-Columbia	Lower Columbia	Total Release
Fall Chinook	2,580,499	12,511,808	21,958,796	37,051,103
Spring Chinook	10,487,462	3,975,400	5,226,390	19,689,252
Summer Chinook	2,374,050	3,125,983		5,500,033
Coho	1,367,111	2,387,178	5,959,828	9,714,117
Sockeye	76,927	315,790		392,717
Summer Steelhead	9,214,209	1,184,775	454,392	10,848,923
Winter Steelhead			79,070	79,070
Total	26,100,258	23,500,934	33,674,023	83,275,215

Adult Fish Passage -:At Bonneville Dam, summer chinook passage ranged between 150 and 600 per day through the count week ending July 29. To date, 91,223 adult summer chinook have been counted; this total is less than the counts recorded during the preceding two years but is double the 10-year average at Bonneville Dam. Summer chinook passage above McNary Dam totaled 62,574 through July 29 with the turnoff into the Snake River at 12,453 (Ice Harbor count), and in the Mid-Columbia River about 62,100 summer chinook were counted at Priest Rapids Dam. Daily counts of adult summer chinook at Ice Harbor Dam averaged 25 per day with counts at Priest Rapids Dam averaging 763 per day for the week ending July 29. For the season, chinook passage into the Snake River is reduced from 2003 (about 61% of 2003 count) but about 1.4 times greater than the 10-year average. Mid-Columbia passage of adult summer chinook in 2004 is returning at about 83% of the 2003 count at Priest Rapids Dam, but is 2.1 times greater than the 10-year average count for the season.

Steelhead passage at Bonneville Dam continued to fall with numbers reduced from about 2,400 per day early in the week to 1,300 per day late in the week ending July 29. As in previous reports, only about 1/3rd to 1/4th of these fish are now passing upstream of The Dalles Dam (range = 300 to 700 per day). At Bonneville, the steelhead

run totals 85,188 through July 29 and this count is about 83% and 114% of the respective 2003 and 10-year average. Steelhead passage in the Snake River increased slightly above the preceding week with daily counts that ranged between 350 and 700 at Ice Harbor Dam, and a season total of 12,100 through July 29. In the Mid-Columbia River, steelhead counts at Priest Rapids Dam averaged 168 per day, an increase from the previous week. The total steelhead count is about 3,800 for the season. Warm water temperatures were prevalent in the lower Columbia River, and a portion of the fish bound for upriver sites are temporarily residing in some of the backwater areas and tributaries in the Bonneville pool as these rivers and streams have cooler water temperatures than the mainstem Columbia River. Once past The Dalles Dam, additional steelhead hold in the Deschutes River as it also has cooler water temperatures than the main Columbia River.

Sockeye passage at Bonneville Dam is nearing completion for the year with about 50 per day passing the project. The total count through July 29 was 122,994, and compares to 39,109 and 42,499 for the respective 2003 and 10-year average. Sockeye passage through the upper Columbia projects: Rock Island, Rocky Reach and Wells dams had daily counts that ranged between 300 and 1,200 for the week. The Rock Island count was near 105,500 with about 79,500 counted upstream at Rocky Reach Dam. To date, at least 75% of the sockeye run will be bound for the Okanogan River system with the remaining total (currently 25%) to the Wenatchee River system. Overall, the 2004 count of adult sockeye will be slightly above the 2001 total and the highest count since 1985. This year's count of 110 sockeye at Lower Granite Dam is one of the higher totals in recent years. These Snake River sockeye are mainly destined for several of the lakes in the upper Salmon River basin.

NOTE for 2002 Lower Monumental Data: Due to the non-standard operation of Lower Monumental this year, the passage index reliability is in question and is being looked into.

Fall (post SMP season) trapping at the Imnaha River Fish Trap (IMN) is funded by the Lower Snake River Compensation Program (LSRCP)

<http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

- WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts
- IMN (Collection) = Imnaha River Trap : Collection Counts
- GRN (Collection) = Grande Ronde River Trap : Collection Counts
- LEW (Collection) = Snake River Trap at Lewiston : Collection Counts
- ENT (Collection) = Entiat River Trap : Collection Counts
- LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$
- MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse Flow} / (\text{Powerhouse Flow} + \text{Spill}) \}$
- BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse 2 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$
- BO1 (Index) = Bonneville Dam First Powerhouse Bypass Collection System : Passage Index Counts
 $\text{Passage Index} = \text{Collection Counts} / \{ \text{Powerhouse 1 Flow} / (\text{Powerhouse 1 \& 2 Flow} + \text{Spill}) \}$

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.
 RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.
 LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.
 LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.
 IMN data collected for the FPC by the Nez Perce Tribe. ENT data collected for the FPC by USFWS.

WEL is through 07/26. RIS, RRH are through 07/27.

IHR is missing 06/18, 07/02. LGR has duplicate data 07/14 and 07/15.

**PRD is not reporting Wild Steelhead numbers.

These numbers were collected from the COE's Running Sums text files, except where otherwise noted.

Wild steelhead numbers are included in the total.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 07/30/04

BON counts from January 1, 2004 to March 14, 2004 (our traditional counts begin March 15)

Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
