

Fish Passage Center

Weekly Report #04 - 24

August 20, 2004

2501 SW First Ave., Suite 230
Portland, OR 97201-4752
phone: 503/230-4582
fax: 503/230-7559

Highlights:

- Flows have averaged 34.1Kcfs at Lower Granite over the summer flow period and the flow objective is 50 Kcfs.
- Flows have averaged 134.4 Kcfs at McNary over the summer season and the flow objective is 200Kcfs.

Summary of Events:

Water Supply: Columbia Basin precipitation throughout the first sixteen days of August has generally been below average in most basins. Over the entire water year, precipitation remains slightly below average in most basins.

Table 1. Summary of August precipitation and cumulative October through August precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2004 August 1-16		Water Year 2004 October 1, 2003 to August 16, 2004	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	0.65	74	21.26	92
Snake River Above Ice Harbor	0.27	61	15.35	93
Columbia Above The Dalles	0.50	82	20.47	95
Kootenai	0.68	78	21.44	90
Clark Fork	0.44	66	14.50	90

Snake River Plain	0.07	22	8.70	83
Salmon/Boise/ Payette	0.29	79	17.08	91
Clearwater	0.30	48	29.11	101
SW Washington Cascades/Cowlitz	0.85	107	59.35	88
Willamette Valley	0.24	43	52.59	92

The summer Flow Objective period started in the Lower Snake River on June 21st, 2004 and will end on August 31st, 2004. Flows have averaged 34.1 Kcfs over the summer flow period; the flow objective is 50 Kcfs. Flows at Lower Granite have averaged 23.9 Kcfs over the last week.

The summer flow period began at McNary on July 1st with a flow objective of 200 Kcfs. Flows have averaged 134.4 Kcfs at McNary over the summer season and 126.8 Kcfs last week.

Grand Coulee is currently at an elevation of 1278.9 feet and has drafted 1.9 feet over the past week. The summer draft limit at Grand Coulee is 1278 feet.

The Libby Reservoir has released a constant 12.5 Kcfs for the entire month of July and most of the month of August. Libby is currently at an elevation of 2444.8 feet. Current projections have Libby drafting to an elevation of 2441.6 feet on August 31st, 2004, which is approximately 112 Kaf of storage above 2439 feet.

The Hungry Horse Reservoir has been drafting for summer flow augmentation and is currently at an elevation of 3545.6 feet. Outflows at Hungry Horse have been 5.2 Kcfs over the last week. Current projections have Hungry Horse drafting to an elevation of 3540.9 feet on August 31st, 2004, which is approximately 21 Kaf of storage above 3540.0 feet.

The Dworshak Reservoir is currently at an elevation of 1546.5 feet and has been drafting for flow and temperature augmentation in the Lower Snake River. Outflows at Dworshak have been approximately 10 Kcfs over the last week with a temperature between 45-46°F.

The Brownlee Reservoir is currently at an elevation of 2060.4 feet and has held relatively steady over the last week. Outflows to Brownlee have ranged between 7.0 and 10.8 Kcfs over the last week.

Spill: Spill at Dworshak ended on August 8, as augmentation flows were reduced to less than powerhouse capacity. There has been no spill at Lower Granite, Little Goose or Lower Monumental dams on the Snake River to facilitate the present policy of maximization of fall chinook juvenile transportation. Summer spill for fish passage is continuing at Ice Harbor Dam, with spill averaging 66% of daily average flow from August 13 through August 19. During the same time period, Biological Opinion summer spill continued at the Lower Columbia projects with spill averaging 30% of daily average flow at John Day dam, 38% at The Dalles Dam and 63% at Bonneville Dam. There is no summer spill program at McNary Dam as the present Biological Opinion focuses on the maximization of transportation of fall chinook juveniles.

The percentage of water spilled at Bonneville Dam remains increased this past week. This, however, does not represent an increase in spill volumes, but is necessary due to a discrepancy identified by the COE last week in the calibration of the spill gate openings. This incorrect calibration at Bonneville Lock and Dam caused less water to be released than reported. Because of this calibration error the daytime spill quantity reported at Bonneville Dam will continue to be approximately 85 kcfs, while the actual spill quantity is about 75 kcfs. This discrepancy in actual and reported spill quantities will continue until a plan for calibration is prepared by the COE.

Gas bubble trauma monitoring is continuing at Rock Island, and at McNary and Bonneville dams. One fish was observed with minor signs of gas bubble trauma at Rock Island Dam over the past week.

Smolt Monitoring: Subyearling chinook indices decreased at all sites in the Snake River and Lower Columbia over the past week compared to the previous week.

At Lower Granite Dam, subyearling chinook indices were down from an average index of 730 per day last week to 450 per day this week. Of the wild subyearling PIT-tags passing Lower Granite Dam, Snake River origin tagged fish passed in relatively small numbers this week with 3 detected in the past week compared to 1 the previous week for a total of 32% of released tags detected to date. There were 8 detections of subyearlings marked in the Clearwater River compared to 20 last week, representing nearly 7% of total tags detected to date at Lower Granite Dam. Little Goose and Lower Monumental dams also had drops in subyearling chinook passage indices over the past week, with the index averaging 430 per day at Little Goose, and 80 per day at Lower Monumental compared to 860 and 180 last week, respectively.

At Rock Island Dam the numbers of subyearling chinook decreased, with the index averaging 40 per day this week compared to 80 last week. In the Lower Columbia, at McNary Dam, subyearling chinook indices averaged 1,400 per

day this week compared to nearly 3,400 per day last week. At John Day Dam the subyearling average index was 580 per day this week compared to 1,400 last week, while at Bonneville Dam the average index was 1,300 compared to 1,800 last week.

Hatchery Releases: For the 2004 juvenile migration, about 83.3 million yearling chinook, coho, steelhead, sockeye, and subyearling chinook salmon were released from Columbia River Basin hatcheries above Bonneville Dam. Salmon species released into streams or lakes (sockeye) during this summer and fall, 2004, normally reside in the streams or rivers through the winter and then migrate to the ocean the following spring (2005). Hatchery release numbers will be updated and finalized through the year; however, the numbers below represent most of the hatchery releases for the 2004 migration season.

Race/Species	Friday 20-August-2004			
	Snake River	Mid-Columbia	Lower Columbia	Total Release
Fall Chinook	2,580,499	12,511,808	21,958,796	37,051,103
Spring Chinook	10,487,462	3,975,400	5,226,390	19,689,252
Summer Chinook	2,374,050	3,125,983		5,500,033
Coho	1,367,111	2,387,178	5,959,828	9,714,117
Sockeye	76,927	315,790		392,717
Summer Steelhead	9,214,209	1,184,775	454,392	10,848,923
Winter Steelhead			79,070	79,070
Total	26,100,258	23,500,934	33,674,023	83,275,215

Adult Fish Passage: At Bonneville Dam, final count of summer chinook for the 2004 season was 92,143 through July 31. This total was less than recorded during the preceding two years, but was near double the 10-year average. Summer chinook passage at projects above McNary Dam totaled 67,060 at Priest Rapids Dam in the Mid-Columbia River and about 12,600 adult chinook at Ice Harbor Dam for the Snake River portion. For the season, summer chinook passage into the Snake River is reduced from 2003 (about 61% of 2003 count) but about 1.4 times greater than the 10-year average. Mid-Columbia passage of adult summer chinook in 2004 is returning at about 81% of the 2003 count at Priest Rapids Dam, but about double the 10-year average count for the season. Upstream at Rock Island Dam, the count now exceeds 62,000 with more than 41,000 above Rocky Reach Dam. A portion of the summer chinook is destined for the Wenatchee River, and these fish entering the Wenatchee River should be fairly close to the difference between the Rock Island and Rocky Reach count. Summer chinook above Rocky Reach will be entering River systems such as the Entiat, Methow, and Okanogan with the major hatchery of return being Wells Hatchery. In the Snake River, most of the summer chinook are bound for the Salmon River, principally the S. Fork Salmon and the Pahsimeroi rivers.

On August 1st, the counts of chinook changed to "fall chinook" and will be designated as such through the remainder of the fish counting season at Bonneville Dam. Through August 19, adult fall chinook appear to be passing satisfactorily as 12,619 have been counted compared to 13,289 in 2003 and 10,765 for the 10-year average. The TAC projects another excellent run of fall chinook for the 2004 season and although this is just a start of the run, it has at least started on the right foot, despite warm water temperatures and other factors that might reduce or delay the run.

Steelhead passage at Bonneville Dam have averaged 2,170 per day for the week ending on August 19. Steelhead counts passing upstream of The Dalles Dam ranged from 160 to 500 per day with the season total at 41,092. At Bonneville, the

steelhead run totals 168,435 through August 19, and this count was about 79% and 103% of the respective 2003 and 10-year average. Steelhead passage in the Snake River decreased from the preceding week with daily counts that were between 129 and 254 at Ice Harbor Dam, and a season total of 15,736 through August 19. In the Mid-Columbia River, steelhead counts at Priest Rapids Dam averaged 75 per day, a decrease from the previous week. The total steelhead count is about 5,800 for the season. Warm water temperatures remain present in the lower Columbia River, and a portion of the fish bound for upriver sites are residing in some of the backwater areas and tributaries in the Bonneville pool as these rivers and streams have cooler water temperatures than the mainstem Columbia River. Once past The Dalles Dam, additional steelhead hold in the Deschutes River as it also has cooler water temperatures than the main Columbia River. Water temperatures measured at Snake and Columbia River sites are near the 70°F point, not great temperatures for salmon species.

Sockeye passage is winding down in the upper Columbia as Rock Island and Rocky Reach dams have about 12 or fewer sockeye per day now passing the projects. The Rock Island count was near 106,500 with about 81,000 counted upstream at Rocky Reach Dam. To date, at least 78% of the sockeye run will be bound for the Okanogan River system with the remaining total (currently 22%) to the Wenatchee River system. Overall, the 2004 count of adult sockeye will be highest count recorded since 1985 at Bonneville Dam with the majority of these fish migrating to the Mid- and Upper-Columbia. This year's count of 110 sockeye at Lower Granite Dam is one of the higher totals in recent years. These Snake River sockeye are mainly destined for several of the lakes in the upper Salmon River basin.

NOTE for 2002 Lower Monumental Data: Due to the non-standard operation of Lower Monumental this year, the passage index reliability is in question and is being looked into.

Fall (post SMP season) trapping at the Imnaha River Fish Trap (IMN) is funded by the Lower Snake River Compensation Program (LSRCP)

<http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

ENT (Collection) = Entiat River Trap : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

BO1 (Index) = Bonneville Dam First Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 1 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe. ENT data collected for the FPC by USFWS.

IHR, RIS, and RRH are through 8/17; WEL is through 8/18.

IHR is missing 7/2; LGR has duplicate data 7/14 and 7/15.

*PRD is not posting wild steelhead numbers.

These numbers were collected from the COE's Running Sums text files, except where otherwise noted.

Wild steelhead numbers are included in the total.

Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.

Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 08/20/04

BON counts from January 1, 2004 to March 14, 2004 (our traditional counts begin March 15)

Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
