

Fish Passage Center

Weekly Report #09 - 25

August 28, 2009

1827 NE 44th Ave., Suite 240
 Portland, OR 97213
 phone: 503/230-4099
 fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 40% and 231% of average at individual sub-basins through August. Precipitation above The Dalles has been 142% of average over August. Over the entire water year, precipitation has generally been near average.

Table 1. Summary of August Precipitation and cumulative October through August precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2009 August 1-24		Water Year 2009 October 1, 2008 to August 1-24, 2009	
	Observed (inches)	% Average	Observed (inches)	% Average
Columbia Above Coulee	1.70	130	21.73	92
Snake River Above Ice Harbor	1.09	164	19.17	115
Columbia Above The Dalles	1.31	142	21.98	101
Kootenai	1.58	120	21.38	88
Clark Fork	1.64	163	17.41	106
Flathead	1.89	152	20.30	94
Pend Oreille/Spokane	1.55	157	28.28	96
Central Washington	0.12	42	7.06	82
Snake River Plain	0.77	172	12.80	120
Salmon/Boise/Payette	1.25	231	18.75	99
Clearwater	1.98	213	31.58	108
SW Washington Cascades/Cowlitz	1.35	113	60.33	89
Willamette Valley	0.33	40	48.55	84

Table 2 displays the June Final and July Final runoff volume forecasts for multiple reservoirs. The most notable differences between the June Final and July Final forecasts came at Libby Dam and Lower Granite Dam. At Libby, the July Final forecast decreased 11% relative to the June Final Forecast. At Lower Granite Dam, the July Final forecast increased 7% relative to the June Final Forecast, it appears most of the increase at Lower Granite was due to an increase in water supply above Brownlee Dam (increased 14%). The Water Supply Forecast at The Dalles between January and July is 89300 Kaf (83% of average).

Table 2. June Final and July Final Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	June Final		July Final	
	% Average (1971- 2000)	Probable Runoff Volume (Kaf)	% Average (1971- 2000)	Probable Runoff Volume (Kaf)
The Dalles (Jan-July)	86	92000	83	89300
Grand Coulee (Jan-July)	85	53700	79	49600
Libby Res. Inflow, MT (Apr-Aug)	80	5000 5062*	69	4330
Hungry Horse Res. Inflow, MT (Jan-July)	93	2060	91	2020
Lower Granite Res. Inflow (Apr-July)	102	21900	109	23500
Brownlee Res. Inflow (Apr-July)	76	4780	90	5710
Dworshak Res. Inflow (Apr-July)	98	2590 2597*	97	2570

*Denotes COE Forecast

The summer flow period began on 6-21-09 at Lower Granite Dam and the objective is 52.5 Kcfs. Flows at Lower Granite have average 49.5 Kcfs over the summer period and 32.2 Kcfs last week.

The summer flow period began on July 1 at McNary Dam and the objective is 200 Kcfs. Flows at McNary Dam have averaged 143.7 Kcfs over the summer period and 117.9 Kcfs last week.

Grand Coulee Reservoir is at 1278.7 feet (8-27-09) and drafted 2.2 feet over the last week. Outflows at Grand Coulee have ranged between 49.0 and 90.9 Kcfs over the last week.

The Libby Reservoir is currently at elevation 2443.3 feet (8-27-09) and has held steady last week. Outflows at Libby are currently 7 Kcfs (minimum bull trout flow) and will remain at this level through August.

Hungry Horse is currently at an elevation of 3555.1 ft (8-27-09) and has drafted 1.0 foot last week. Outflows at Hungry Horse have been approximately 2.5 Kcfs last week. The BOR plans to draft Hungry Horse to elevation 3550 by the end of September.

Dworshak is currently at an elevation of 1538.0 feet (8-27-09) and has drafted 6.8 feet last week. Outflows at Dworshak were decreased to 8 Kcfs on 8-24-09.

The Brownlee Reservoir was at an elevation of 2054.7 feet on August 27th, 2009, drafting 3.3 feet last week. Outflows at Brownlee Dam have been 11.1 to 15.1 Kcfs over the last week.

Spill:

The 2009 planned summer spill program at the lower Snake River Projects began at 0001 hours on June 20, 2009. The following table shows the planned operations for 2009.

Project	Day/Night Spill
Lower Granite	18Kcfs/18Kcfs
Little Goose	30%/30%
Lower Monumental	17Kcfs/17Kcfs
Ice Harbor	45Kcfs/Gas Cap

Lower Granite Dam spilled at, or above, the Court Order, except on the 25th, 26th, and 27th when lower flows and powerhouse minimum flows precluded spilling 18 Kcfs. On August 18th, due to concerns over tailrace egress conditions at low flows, spill at Little Goose Dam was changed from 30% of instantaneous flow to a flat spill of 11.6 Kcfs. Flows continued to decrease over the past week so the 11.6 Kcfs spill

was reduced to 9.9 Kcfs on August 26th. However, these flat spill amounts at Little Goose have resulted in spill in excess of the 30% Court Order. At Lower Monumental dam the 17 Kcfs spill was met most days, except for August 25th through 27th due to low flows and powerhouse minimum requirements. At Ice Harbor Dam the court ordered levels of 45 Kcfs daytime spill and gas cap nighttime spill were often precluded due to low flows and required powerhouse minimum flows. The minimum spill of 15.2 Kcfs at Ice Harbor was met this week, except for a 14 hour period on the evening of August 25th and morning of August 26th. This was due to the Sacagawea substation coming back on line, Ice Harbor needing to run Unit 1 for four consecutive days, and the low flows at Ice Harbor during this time.

The following table shows the planned operations for summer spill levels in the lower Columbia River for 2009.

Project	Day/Night Spill
McNary	50%/50%* (beginning June 20)
John Day	30%/30%
The Dalles	40%/40%
Bonneville	75 Kcfs/gas cap

McNary Dam spill met the 50% Court Ordered spill level this week, except on the 23rd when lower flows and powerhouse minimum flows precluded spilling 50%. John Day Dam spilled an instantaneous 30% all week. At The Dalles Dam flows were high enough to meet the 40% spill requirement all week. Flows at Bonneville Dam were generally low this week. Therefore, all flow above the powerhouse minimum and miscellaneous flows of about 42 Kcfs were spilled this week. Daily average spill at Bonneville Dam ranged from 66.4 Kcfs to 83.4 Kcfs this week.

There were no exceedences of the 115%/120% TDG levels at the gages required for management of spill this past week. However, TDG registered slightly above 115% at the Camas/Washougal gage on August 27th. The total dissolved gas levels were due to the diel heating, and there is no water quality requirement to manage spill to this gage.

Gas bubble trauma (GBT) monitoring occurred at Little Goose and Lower Monumental dams in the Snake River, and at McNary and Bonneville dams in the lower Columbia. Over the past week no fish were detected with signs of GBT.

Smolt Monitoring:

Subyearling Chinook smolts continue to decline in numbers throughout the system. Unclipped subyearlings predominate at all the sites at this time suggesting that many of the late season outmigrant fish are of wild origin. It should be noted however, that a good portion of hatchery origin fish were unmarked as well.

At Lower Granite Dam subyearling Chinook predominated with coho smolt numbers second in prevalence but at very low numbers. Average daily passage index for subyearling Chinook was at 100 per day this week compared to 190 per day last week. At Little Goose Dam the subyearling Chinook indices decreased this week with the daily average index at 80 per day this week compared to 126 last week.

At Rock Island dam subyearling Chinook predominated in the sample, with indices averaging over 13 per day this week compared to 30 per day last week.

In the lower Columbia River, at McNary Dam, the subyearling Chinook weekly average passage index remained steady this week thanks to the passage index of nearly 11,000 fish on August 21. Otherwise the smolt numbers declined rapidly over the week with the passage index on August 27 of 426. John Day and Bonneville Dam continue to limit sampling due to high temperatures at those projects. Subyearling Chinook weekly average passage indices dropped from nearly 1,500 per day last week to about 700 per day this week at Bonneville Dam.

Hatchery Release:

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. There were no releases of juvenile salmonids scheduled for this week. Furthermore, no releases of juvenile salmonids are scheduled to begin over the next two weeks.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. There were no scheduled releases of juvenile salmonids to this zone this week. There are no releases of juvenile salmonids to this zone over the next two weeks.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. No releases of juvenile salmonids were scheduled for this zone

over the past week. Furthermore, there are no releases scheduled for this zone over the next two weeks.

Adult Passage:

Chinook salmon passing Bonneville Dam on or after August 1st are counted as fall Chinook. Daily counts of adult fall Chinook ranged from 3564 to 10857. The 2009 adult fall Chinook count of 70920 was about 1.15 times greater than the 2008 count and about 1.66 times greater than the 10 year average. The fall Chinook jack count of 23712 was about 3.17 times greater than the 2008 count and about 5.30 times greater than the 10 year average. The adult fall Chinook count total at The Dalles Dam of 36318 is about 51.2% of the Bonneville passage to date.

Daily steelhead counts at Bonneville Dam for the past week ranged between 6568 and 19067. The daily adult steelhead count of 34053 on 8/13/09 was the highest recorded adult daily steelhead count at Bonneville Dam (date range searched was 1977 through 2009). Prior to this, the 2nd highest adult daily steelhead count at Bonneville Dam occurred on August 3rd, 2001 when a total of 14432 adult steelhead were counted. The Bonneville Dam 2009 steelhead count of 456886 is about 1.98 times greater than the 2008 count and 1.94 times greater than the 10 year average.

During this time of year, there are times when there are higher steelhead counts at upstream projects compared to downstream projects. The higher counts of steelhead at upstream sites compared to downstream sites in any particular year is because some steelhead spend the winter between sites, for instance between Ice Harbor and Lower Granite, and then start their migration upstream the following year. The summer steelhead run is delineated according to dates of passage past Bonneville Dam and is made up of two components. A-run steelhead are considered those that pass Bonneville Dam from the first of June through August 25th and B-run steelhead pass Bonneville from August 26th through October. A-run summer steelhead pass Bonneville Dam through August 25th. The 2009 A-run adult steelhead count at Bonneville was 439478 which was about 2 times greater than the 2008 count of 219576 and was about 2.10 times greater than the 10 year average count of 209104. The 2009 B-run steelhead began on August 26th at Bonneville Dam and was 12900 as of August 27th. The 2009 B-run steelhead count is about 1.96 times greater than the 2008 count of 6767 and is about 1.70 times greater than the 10 year average count of 7562.

In the Snake River, this year's Lower Granite total steelhead count of 22461 is about 94.1% of the 2008 count of 23867 and 1.36 times greater than the 10 year average of 16461. The 2009 wild steelhead count as of August 27th was 7616. At Rock Island Dam, as of August 26th, 8034 adult steelhead had been counted and at Rocky Reach Dam, 6029 adult steelhead had been counted so far this season. At Willamette Falls Dam, the 2009 count for steelhead was 17200, as of August 26th. This year's steelhead count is only about 91.9% of the 2008 count of 18718 at Willamette Falls Dam for the same date range.

The 2009 adult sockeye count at Bonneville Dam of 177820 is about 83.2% of the 2008 count of 213590 and about 2.26 times greater than the 10 year average of 78589. In the upper Columbia River at Priest Rapids Dam, the 2009 adult sockeye count of 153465 was about 77.9% of the 2008 count and 2.05 times greater than the 10 year average. Two of the major spawning sites for sockeye in the upper Columbia River zone are Lake Wenatchee and Lake Osoyoos (Okanogan basin). In the Snake River at Lower Granite Dam the 2009 adult sockeye count of 1215 was about 1.36 times greater than the 2008 count of 892 and 9.64 times greater than the 10 year average count of 126.

The 2009 adult coho count at Bonneville Dam is 24262 adults and 1904 jacks. The Bonneville 2009 adult coho count is about 8.51 times greater than the 2008 count of 2851 and is about 6.27 times greater than the 10 year average count of 3869. The 2009 coho jack count of 1904 is about 7.32 times greater than the 2008 count of 1904 and is about 6.35 times greater than the 10 year average count of 300 at Bonneville Dam.

The posting of the daily fish counts have been delayed a few days this week on the Corp of Engineers website due to computer problems. The COE is working on fixing the problems. FPC staff downloaded project station estimated count files and summarized the data. The data for 8/27 are preliminary data.

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, and sockeye. Two classes of fish counts are shown in these tables: collection counts, which account for sample rates but are not adjusted for flow; and passage indices, which are collection counts divided by the proportion of water passing through the sampled powerhouse. Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations. The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Definitions for Smolt Index Counts

- WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts
- IMN (Collection) = Imnaha River Trap : Collection Counts
- GRN (Collection) = Grande Ronde River Trap : Collection Counts
- LEW (Collection) = Snake River Trap at Lewiston : Collection Counts
- LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}
- MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}
- BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts
Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.
 RIS data collected for the FPC by Chelan Co. PUD/Washington Dept. of Fish and Wildlife.
 LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.
 LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.
 IMN data collected for the FPC by the Nez Perce Tribe.

PRD does not post wild steelhead numbers. These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART. Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish. Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC. Historic counts 1997 to present were obtained from the Corps of Engineers.

Page last updated on: 08/28/09

BON counts from January 1, 2009 to March 14, 2009 (historical counts begin March 15):

Year	Chinook Adult	Chinook Jack	Steelhead	Wild Steelhead
2009	19	-1	321	109
2008	42	0	561	270
