

Fish Passage Center

Weekly Report #12 - 13

June 8, 2012

1827 NE 44th Ave., Suite 240
 Portland, OR 97213
 phone: 503/230-4099
 fax: 503/230-7559

Summary of Events:

Water Supply: Precipitation throughout the Columbia Basin has varied between 48% and 130% of average at individual sub-basins over May. Precipitation above The Dalles has been 79% of average over May. Over the 2012 water year, precipitation has ranged between 84% and 111% of average.

Table 1. Summary of May precipitation and cumulative October through May 28, 2012 precipitation with respect to average (1971-2000), at select locations within the Columbia and Snake River Basins.

Location	Water Year 2012 May 1-28, 2012		Water Year 2012 October 1, 2011 to May 28, 2012	
	Observed (inches)	% Average	Observed (inches)	% Average
	Columbia Above Coulee	1.39	69	19.96
Snake River Above Ice Harbor	1.43	84	13.78	102
Columbia Above The Dalles	1.40	79	19.08	108
Kootenai	1.23	61	20.13	110
Clark Fork	1.43	77	13.47	111
Flathead	1.73	78	17.26	108
Pend Oreille/ Spokane	2.05	87	27.27	110
Central Washington	0.33	48	6.10	84
Snake River Plain	1.07	80	8.38	99
Salmon/Boise/ Payette	1.26	78	16.38	102
Clearwater	2.93	107	26.62	111
SW Washington Cascades/Cowlitz	4.44	130	63.38	102
Willamette Valley	3.70	116	57.57	108

Average snowpack in the Columbia River for basins above the Snake River confluence is 150% of average, for Snake River Basins the average snowpack is 44% of average, and for lower Columbia Basins between McNary

and Bonneville Dam average snowpack is 115% of average.

Table 2 displays the May 29th and June 6th Ensemble Streamflow Prediction (ESP) runoff volume forecasts for multiple reservoirs. The June 6th forecast at The Dalles between January and July is 121,849 Kaf (114% of average).

Table 2. May 29th and June 6th ESP Runoff Volume Forecasts for various reservoirs within the Columbia and Snake River Basins.

Location	May 29, 2012 ESP		June 6, 2012 ESP	
	% Average (1971 -2000)	Runoff Volume (Kaf)	% Average (1971 -2000)	Runoff Volume (Kaf)
The Dalles (Jan-July)	109	117424	114	121849
Grand Coulee (Jan-July)	113	71280	119	75140
Libby Res. Inflow, MT (Apr-Aug)	117	7281 7155*	129	8044 7240*
Hungry Horse Res. Inflow, MT (Jan-July)	103	2290	107	2387
Lower Granite Res. Inflow (Apr- July)	99	21410	102	21950
Brownlee Res. Inflow (Apr-July)	84	5275	88	5532
Dworshak Res. Inflow (Apr-July)	114	3024 3226*	118	3110 3236*

* Denotes COE Forecast

Grand Coulee Reservoir is at 1265.6 feet (6-7-12) and refilled 10.6 feet over the last week. Grand Coulee is currently 24.4 feet from full (1290 feet). Outflows at Grand Coulee have ranged between 107.6 and 210.1 Kcfs over the last week.

The Libby Reservoir is currently at elevation 2431.3 feet (6-7-12) and has refilled 10.5 feet last week. Libby is currently 27.7 feet from full (2459 feet). Outflows at Libby Dam have ranged between 13.1-29.9 Kcfs last week.

Hungry Horse is currently at an elevation of 3551.1 feet (6-7-12) and has refilled 6.6 feet last week. Hungry Horse is currently 8.9 feet from full (3560 feet). Outflows at Hungry Horse have been 6.4-7.9 Kcfs last week.

Dworshak is currently at an elevation of 1589.1 feet (6-7-12) and has refilled 9.2 feet last week. Dworshak is currently 10.9 feet from full (1600 feet). Outflows from Dworshak have been 2.2-9.6 Kcfs over the past week.

The Brownlee Reservoir was at an elevation of 2069.5 feet on June 6th, 2012 refilling 3.1 feet last week. Brownlee is currently 7.5 feet from full (2077 feet). Over the last week, outflows at Brownlee have ranged between 11.8 and 17.8 Kcfs.

The Biological Opinion flow period began on April 3rd in the lower Snake River (Lower Granite). According to the April Final Water Supply Forecast, the flow objective this spring is 100 Kcfs at Lower Granite. Flows at Lower Granite Dam have averaged 106.5 Kcfs over the last week and 111.6 Kcfs over the spring period.

Based on the April Final Water Supply Forecast, the Spring Biological Opinion Flow Objectives are 260 Kcfs at McNary Dam (began April 10th) and 135 Kcfs at Priest Rapids Dam (began April 10th). Flows at McNary Dam have averaged 307.8 Kcfs over the last week and 336.0 Kcfs over the spring period. Flows at Priest Rapids Dam have averaged 194.8 Kcfs over the last week and 214.4 Kcfs over the spring period.

Spill:

Spring spill for fish passage began on April 3rd at the lower Snake River projects, and on April 10th at the lower Columbia River projects.

Snake River flows increased over the past few days due to rain. Consequently, at Lower Granite Dam spill met the Court Ordered 20 Kcfs for the first four days of the past week and was above 20 Kcfs on the last three days due to flows in excess of generation

needs and hydraulic capacity. At Little Goose Dam spill met the 30% of instantaneous flow level as specified in the Court Order until flows exceeded hydraulic capacity on June 5th. Spill ranged between 30 and 39.8% at this project. At Lower Monumental Dam spill ranged from 25.7 Kcfs when the COE could curtail spill for TDG management, and 48.5 Kcfs, with the higher amounts due to uncontrolled spill. At Ice Harbor Dam the Court Order “test-like” conditions are in place and have been met, with the exception of June 6th and part of June 7th.

Project	Day/Night Spill
Lower Granite	20 Kcfs/20 Kcfs
Little Goose	30%/30%
Lower Monumental	Gas Cap/Gas Cap
Ice Harbor	“Test-Like” : 45 Kcfs/gas cap vs. 30%/30%

Spill for fish passage at the Lower Columbia projects began on April 10th. Flows were relatively high in the lower Columbia River towards the end of the week. Spill at McNary Dam met, or exceeded, the Court Order as a result of flows in excess of hydraulic capacity due to unit outages. Spill at John Day Dam changed to the test levels of 30%/30% versus 40%/40%. For the most part, spill test levels were met at John Day during the first part of the week, but were higher than the 30% level towards the end of the week. At The Dalles Dam, spill generally met, or exceeded the 40%. Spill at Bonneville Dam was below the 100 Kcfs for four days for management of TDG to the Camas/Washougal Monitor, at the 100 Kcfs for one day, and then increased to above the 100 Kcfs on the last two days due to: higher flows, a reprioritization of the spill priority list for distribution of excess spill, and an attempt to operate Bonneville PH2 at the mid-range of the 1% efficiency range.

Project	Day/Night Spill
McNary	40%/40%
John Day	Testing : 30%/30% vs. 40%/40%
The Dalles	40%/40%
Bonneville	100 Kcfs/100 Kcfs

Gas bubble trauma samples were taken this

past week at Lower Granite, Little Goose, Lower Monumental, Rock Island, McNary and Bonneville dams. The most recent samples estimated fish with signs of GBT equal to: 0% at Lower Granite (6/7); 0% at Little Goose (6/4), 1% at Lower Monumental (5/30), 0% at McNary (6/6), 0% at Bonneville (6/5) and 0% at Rock Island (6/7). All the affected fish exhibited minor (Rank 1) signs of GBT. All observed signs were well below the action criteria of 15%.

Smolt Monitoring:

Smolt monitoring activities are ongoing at all seven SMP dams (BON, JDA, MCN, LGR, LGS, LMN, and RIS). The Imnaha River Trap is the only SMP trap that is still collecting juvenile salmonids for the 2012 season.

The passage indices for yearling Chinook, steelhead, and sockeye at BON all decreased this week, when compared to last week. The daily average passage index at BON for yearling Chinook this week was 5,473 per day, compared to over 18,800 per day last week. The daily average passage indices for steelhead and sockeye at BON this week were nearly 1,200 and 3,000 per day, respectively. Subyearling Chinook numbers continued to increase this week, with a daily average passage index of nearly 7,200 per day. The daily average passage index for subyearling Chinook last week was just over 6,000 per day. Passage of coho juveniles has also increased at BON this week. This week's daily average passage index for coho was just over 22,700 per day, compared to about 5,200 per day last week. This increase in coho passage is largely due to a release of over 1.0 million coho juveniles from Klickitat Hatchery on May 29th and 30th. The second powerhouse of BON has been operated at the mid-range (50%) of the 1% efficiency range all this week, in order to address increased mortality and descaling of sockeye juveniles seen in past weeks. This operation is expected to run through at least June 11th. Sockeye mortality at BON this week has ranged from 0.0% to 9.1% while descaling has ranged from 0.0% to 13.2%. Finally, pacific lamprey macrophthalmia continue to be the primary lamprey juveniles collected at BON this week. One pacific lamprey ammocoete was sampled on June 3rd. The daily average collection for pacific lamprey macrophthalmia was 70 per day.

Passage at JDA decreased for nearly all species this week, when compared to last week. The daily average passage index for yearling Chinook at JDA

for this week was nearly 7,200 per day, compared to just over 28,000 per day last week. The daily average passage index for steelhead this week was nearly 4,000 per day, compared to over 9,000 per day last week. The only species of juvenile salmonid that had an increase in passage at JDA this week was subyearling Chinook. The daily average passage index for subyearling Chinook at JDA this week was 1,228, compared to nearly 560 per day last week. Lamprey collections at JDA this week were dominated by pacific lamprey macrophthalmia. The daily average collection for pacific macrophthalmia at JDA this week was 1,558 per day. Pacific ammocoetes were only collected on one day this week (June 6).

Passage at MCN also decreased for nearly all species this week, except for subyearling Chinook. The daily average passage index for yearling Chinook at MCN this week was nearly 13,900, whereas that for last week was just over 34,500 per day. The daily average passage index for subyearling Chinook at MCN this week was nearly 3,400 per day, compared to almost 2,300 per day last week. Pacific lamprey macrophthalmia continue to be the only lamprey juveniles collected at MCN so far this year. Collections of pacific lamprey macrophthalmia at MCN decreased this week. The daily average collection for pacific lamprey macrophthalmia at MCN was 383 per day. Last week's daily average collection was 1,675 per day.

Yearling Chinook and steelhead passage at LGR continued to decrease this week. The daily average passage index for yearling Chinook at LGR this week was nearly 1,100 per day, compared to just over 6,200 per day last week. This week's daily average passage index for steelhead at LGR was nearly 5,700 per day. The daily passage index for steelhead at LGR last week was nearly 12,000 per day. Sockeye passage at LGR also continued to decrease this week. The daily average passage index for sockeye at LGR this week was 172 per day, compared to 525 per day last week. Coho passage at LGR also decreased this week. Subyearling Chinook passage continued to increase this week, with a daily average passage index of nearly 32,600 per day, compared to just over 8,500 per day last week. Finally, only pacific lamprey ammocoetes were sampled at LGR this week at LGR, with one ammocoete in the sample on each of June 1st and June 2nd.

Passage at LGS decreased for nearly all species this week, except for subyearling Chinook. The daily average passage indices for yearling Chinook and steelhead at LGS this week were just over 2,300 and

nearly 8,600 per day, respectively. The daily average passage index for subyearling Chinook at LGS this week was nearly 27,000 per day, compared to only 1,158 per day last week. Both pacific lamprey ammocoetes and macrophthalmia were collected at LGS this week. Passage of yearling Chinook, coho, sockeye, and steelhead at LMN continued to decrease this week. The daily average passage index for yearling Chinook at LMN this week was 1,270, compared to over 5,200 per day last week. Subyearling Chinook were the only salmonids that had an increase in passage at LMN this week. The daily average passage of subyearling Chinook at LMN for this week was over 8,500 per day, compared to only 146 per day last week. Lower Monumental Dam continued to collect pacific lamprey macrophthalmia this week. Over the past week, collection estimates have ranged from 0 to 100 per day. To date, no pacific lamprey ammocoetes have been collected at LMN.

Passage at RIS decreased for nearly all species this week, when compared to last week. Based on the passage index, coho continue to be the dominant species of salmonid passing RIS this week. The daily average passage index for coho at RIS this week was 490 per day. The daily passage index for coho last week was 904 per day. The only species that had an increase in passage this week, compared to last week, was subyearling Chinook. The daily average passage index for subyearling Chinook this week was 149 per day, compared to just 52 per day last week. Very few lamprey juveniles were collected at RIS this week. However, all lamprey juveniles that were collected at RIS this week were pacific lamprey macrophthalmia.

Hatchery Release:

Snake River Zone: The Snake River Zone encompasses the Snake River and its tributaries from its confluence with the Columbia River to Hells Canyon Dam. The only new releases that were scheduled to begin this week were of subyearling fall Chinook. In all, about 700,000 subyearling fall Chinook smolts were scheduled to be released this week. Of these, approximately 500,000 were scheduled for release into the Clearwater River while about 200,000 were scheduled to be released into the Snake River, above Lower Granite Dam. Of the subyearling fall Chinook juveniles that were scheduled for release into the Clearwater River this week, approximately 40% are unmarked. Finally, the releases of Snake River subyearling fall Chinook surrogates were scheduled to end this week. In all,

230,000 Snake River surrogates were scheduled for release in 2012.

In addition to the 700,000 subyearling fall Chinook that were scheduled for release to this zone this week, about 498,000 fall Chinook subyearlings are scheduled for release in this zone over the next two weeks. All of these subyearling fall Chinook juveniles are scheduled for release into the Clearwater River or its tributaries. Approximately 20% of these subyearlings are Clearwater River surrogates, which are hatchery fish that are intentionally reared to a smaller size to more closely resemble wild subyearling fall Chinook. All of these surrogates are unmarked but do have PIT-tags. The remaining 80% are marked, either with an adipose clip and coded-wire-tag or with just a coded-wire tag. Finally, nearly 303,000 spring Chinook parr are scheduled for release into the Clearwater over the next two weeks. These spring Chinook parr are 100% unmarked but are not expected to out-migrate until spring of 2013.

Mid-Columbia Zone: The Mid-Columbia Zone encompasses the area of the Columbia River and its tributaries from McNary Dam to Chief Joseph Dam. There were no new releases of juvenile salmonids scheduled for this zone this week. However, some of the volitional releases of coho juveniles to the Methow and Wenatchee rivers that began in May were scheduled to end this week. In addition, approximately 10.15 million subyearling fall Chinook brights are scheduled for release into this zone over the next two weeks. All of these subyearling fall Chinook juveniles are scheduled for release into the Mid-Columbia River, below Priest Rapids Dam. These releases are going to take place from Priest Rapids (66%) and Ringold Springs (34%) hatcheries. In all, about 32% of these subyearling fall Chinook juveniles are unmarked.

Lower Columbia Zone: The Lower Columbia Zone is defined as the Columbia River and its tributaries from Bonneville Dam to McNary Dam. There were no new releases of juvenile salmonids scheduled for this zone this week. However, there is one change to the hatchery release database that is worth noting. Preliminary data indicated that Klickitat Hatchery was scheduled to release nearly 1.1 million coho juveniles into the Klickitat River in early May. However, the FPC recently received data indicating that this release did not begin until May 29th. Finally, there are no new releases of juvenile salmonids scheduled for this zone over the next two weeks.

Over the past week of available data from the

Imnaha River Trap, steelhead continued to dominate the collection. Over the most recent seven days, the daily average collection for steelhead at this trap was 170 per day, which is a decrease from the previous week. Passage of yearling Chinook at this trap also appears to be very low. The daily average collection for yearling Chinook at the Imnaha Trap over the past seven days of available data was 8 per day.

Adult Fish Passage:

The summer Chinook count began June 1st at Bonneville Dam. Daily passage numbers at Bonneville Dam ranged between 1,374 and 2,480 adult summer Chinook in the last week. The 2012 summer Chinook count of 12,984 is about 83.2% of the 2011 count while being 1.03 times greater than the 10 year average. The 2012 Bonneville Dam summer Chinook jack count of 899 is 12% of the 2011 count and 37.8% of the 10 year average count. At Willamette Falls 22,267 adult spring Chinook have been counted so far this year. The 2012 adult spring Chinook count at Willamette Falls is 1.16 times greater than the 2011 count of 19,127, while being 59.4% of the 10 year average count of 37,454. At McNary Dam 100,857 adult spring Chinook have been counted. The 2012 adult spring Chinook count at McNary Dam has 412 more fish than the 2011 count and is 1.18 times greater than the 10 year average. The 2012 McNary Dam spring Chinook jack count of 4,735 is about 15.3% of the 2011 count and 35.2% of the 10 year average count. The 2012 adult spring Chinook count at Rock Island Dam of 16,117 is about 1.45 times greater than the 2011 count and 1.28 times greater than the 10 year average. The 2011 adult spring Chinook count at Lower Granite Dam of 56,919 is about 1.09 times greater than the 2011 count and 1.25 times greater than the 10 year average. The 2011 Lower Granite spring Chinook jack count of 2,964 is about 19.3% of the 2011 count and 39.3% of the 10 year average count.

The Bonneville Dam 2012 steelhead count of 5,014 is 1.10 times greater than the 2011 count of 4,552, while being about 89% of the 10 year average count of 5,635. The 2012 Bonneville wild adult steelhead count of 1,462 has 20 fewer fish than the 2011 count of 1,482, while it has 16 more fish than the 10 year average count of 1,446. In the Snake River, daily adult steelhead counts at Lower Granite Dam ranged from 0 to 2 adults per day last week. This year's Lower Granite steelhead count of 8,932 is about 79.6% of the 2011 count of 12,303 and 89.3% of the

10 year average of 9,996. The 2012 Lower Granite wild adult steelhead count of 3,942 is about 96.7% of the 2011 count of 4,076, while being about 1.25 times greater than the 10 year average count of 3,150. At Willamette Falls Dam, the 2012 count for steelhead was 18,001, as of June 3rd. This year's steelhead count is about 1.19 times greater than the 2011 count of 15,119 and having 61 more fish than the 10 year average count of 17,940.

Daily adult sockeye passage numbers at Bonneville Dam ranged between 83 and 576 last week. The 2012 adult sockeye count at Bonneville Dam of 2,372 is about 15.8 times greater than the 2011 count of 150 and 2.71 times greater than the 10 year average count of 875.

Two-Week Summary of Passage Indices

* See sampling comments <http://www.fpc.org/currentDaily/smpcomments.htm>

Smolt indices, clipped & unclipped or combined, are presented in the following order: yearling chinook (chinook 1's), subyearling chinook (chinook 0's), steelhead, coho, sockeye, and lamprey juveniles. Two classes of fish counts are shown in these tables:

Two classes of fish counts are shown in these tables:

Collection counts (Coll), which account for sample rates but are not adjusted for flow;

Passage indices (INDEX), which are collection counts divided by the proportion of water passing through the sampled powerhouse.

Passage indices are not population estimates, but are used to adjust collection counts for daily fluctuations in the site's or project's operations.

The classes of counts presented in the report are defined below for each site. Most samples occur over a 24-hr period that spans two calendar days. In this report, the date shown corresponds with the sample end date.

Combined lamprey juvenile collection counts are provided for all sites. Combined lamprey juveniles is a combination of pacific lamprey ammocoetes, brook lamprey ammocoetes, unknown lamprey ammocoetes, pacific lamprey macrophthalmia, and unidentified lamprey species.

† Caution should be used with interpreting lamprey juvenile collection counts at LGR because of the possibility that lamprey may escape the sample tank before being sampled

Definitions for Smolt Index Counts

WTB (Collection) = Salmon River Trap at Whitebird : Collection Counts

IMN (Collection) = Imnaha River Trap : Collection Counts

GRN (Collection) = Grande Ronde River Trap : Collection Counts

LEW (Collection) = Snake River Trap at Lewiston : Collection Counts

LGR (Index) = Lower Granite Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LGS (Index) = Little Goose Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

LMN (Index) = Lower Monumental Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

RIS (Index) = Rock Island Dam Second Powerhouse Bypass Trap : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

MCN (Index) = McNary Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

JDA (Index) = John Day Dam Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse Flow / (Powerhouse Flow + Spill)}

BO2 (Index) = Bonneville Dam Second Powerhouse Bypass Collection System : Passage Index Counts

Passage Index = Collection Counts / {Powerhouse 2 Flow / (Powerhouse 1 & 2 Flow + Spill)}

JDA and BO2 data collected for the FPC by Pacific States Marine Fisheries Commission.

RIS data collected for the FPC by Chelan Co. PUD.

LGR, LMN, and MCN data collected for the FPC by Washington Dept. of Fish and Wildlife.

LGS and GRN data collected for the FPC by Oregon Dept. of Fish and Wildlife.

IMN data collected for the FPC by the Nez Perce Tribe.

WTB and LEW data collected for the FPC by Idaho Dept. of Fish and Game.

PRD does not post wild steelhead numbers.
 These numbers were collected from USACE, Grant PUD, Douglas PUD, Chelan PUD, ODFW and DART.
 Wild steelhead numbers are included in the total. Wild Steelhead are defined as unclipped fish.
 Historic counts (pre-1996) were obtained from CRITFC and compiled by the FPC.
 Historic counts 1997 to present were obtained from the Corps of Engineers.
